

Langenfeld, November 2020

Deurotech Group acquires Eisenmann Environmental Technology

With effect from November 11th, 2020 Deurotech Group with head offices in Langenfeld, Germany, acquires Eisenmann Environmental Technology, based in Böblingen, Germany. Herewith the Deurotech Group strengthens its market position in the field of exhaust air purification and environmental technologies.

The takeover of Eisenmann Environmental Technology expands the existing product portfolio of the subsidiaries Wessel-Umwelttechnik and Airprotech in the field of biological and thermal exhaust air purification processes to include additional environmental technologies.

“We are pleased that the management and the employees of Eisenmann Environmental Technology, with their extensive experience and competence in the worldwide implementation of environmental projects, are now part of our group of companies. Due to the synergy effects which will result in different areas, we will be an even more powerful partner for our customers internationally,” explains Werner Deuring, CEO of the Deurotech Group.

Eisenmann Environmental Technology as well as Airprotech and Wessel-Umwelttechnik have a high level of innovation and know-how in various environmental technologies. This gives us the opportunity for further diversification and global growth. The takeover of Eisenmann Environmental Technology is the next step in the expansion of the environmental technology division of the Deurotech Group.

Deurotech Group is a group of businesses specializing in the field of Environmental Technology and the wood-based panels and paper industry. The machinery and plant engineers Vits Technology and IFA Technology offer coordinated process technology in surface converting from a single source: impregnation and coating lines as well as systems for resin preparation. Airprotech and Wessel-Umwelttechnik manufacture systems for biological and thermal exhaust air purification and energy recovery.

Eisenmann Environmental Technology is a competent partner in the field of environmental technology and offers innovative, resource-saving turnkey solutions according to individual requirements. The broad product portfolio includes systems for exhaust air purification and heat recovery, water purification and wastewater treatment, waste disposal and material recycling, biogas plants, as well as systems for ammunition disposal.
